Dataset

```
 A Japanese businessman announced plans for  a new telecommunications firm in
which Britain's Cable and  Wireless Plc would be a core company.
However, the plan, unveiled by senior Federation of  Economic Organizations off
icial Fumio Watanabe, does not  specify what stake Cable and Wireless would hav
e.
"The share holdings of the core companies should be equal,"  Watanabe said in a
 statement.
"The actual percentage of  shareholdings should be agreed by the core companies
."
He said the eight core companies will provide directors for  the firm.
"The new company shall immediately set to work on the  feasibility study of con
structing a new cable for itself,"  Watanabe said.
Watanabe has acted as mediator between two rival groups,  one of which included
 C and W, seeking to compete against  &lt;Kokusai Denshin Denwa Co Ltd>, which
now monopolizes Japan's  overseas telephone business.
The Post and Telecommunications Ministry has said it wants  only one competitor
 to KDD and has backed Watanabe's efforts.
A British source, who declined to be identified further,  said the proposals co
uld open the door to further talks between  C and W &lt;CAWL.L> and the other f
irms involved.
C and W had earlier rejected a reported proposal which  would have given it a f
ive pct share in the new  telecommunications firm, compared to the less than th
ree pct  stake Watanabe originally proposed.
C and W has a 20 pct stake  in one of the two firms Watanabe has proposed shoul

評分標準

- Baseline accuracy: 0.6
- 依照正確率計算分數
- 交 ipython notebook 檔, 檔名: lab01_學號
- Deadline: 10/09 23:59
- 每遲交一個禮拜扣十分

Python Useful Class

- from collections import Counter, defaultdict

- Counter([1, 2, 3, 4, 5, 6, 1, 2, 3])

```
In [1]: from collections import Counter, defaultdict

In [2]: sample_list = ['a','a','b','c','c','c']

In [3]: Counter(sample_list)
Out[3]: Counter({'a': 2, 'b': 1, 'c': 3})
```

- defaultdict (set default value for key not in dict.keys())

```
In [7]: sample_dict = defaultdict(int)

In [8]: sample_dict['A']
Out[8]: 0
```

Word tokenization

- Import nltk
- nltk.download('punkt') #execute before calling word_tokenize

```
>>> from nltk import word_tokenize
>>> word_tokenize("Hello world.")
['Hello', 'world', '.']
>>>
```
